

## Introduction

DocKeep Pro has many features and capabilities that can be controlled through the use of AppleScript

The 'DocKeep Developer Dashboard' solution is a FileMaker 12 database that provides developers 'dashboard' level control of all of these features.

It is intended for experienced developers who require assistance in constructing valid DocKeep Applescript commands and as a live test laboratory in which developers can experiment modifying how DocKeep interacts with the user as well as third-party programs.

## Requirements

- You must be running Mac OS 10.6 or greater
- You must have installed FileMaker Pro 12, FileMaker Pro 12 Advanced
- You must be running DocKeep Pro Version 8 ([download 15-day trial](#))
- You must use a Fujitsu fi-series scanner

## Step 1 - OPEN the 'DocKeep Developer Dashboard' FileMaker solution

Developer's who already possess a DocKeep Pro, or DocKeep Pro +, license are encouraged to contact Acordex for information.

## Summary

This example solution is for experienced developers who wish to create DocKeep AppleScript commands.
