

Introduction

This is a run-time (RT) version of a FileMaker solution. Please follow the 'Instructions for Launching a FileMaker (RT) Solution' after you read this introduction.

DocKeep Pro can be quickly integrated into any FileMaker Pro solution.

The 'DocKeep Scan Library (RT)' solution is an example that illustrates the ease with which one can scan directly into FileMaker container fields to create a simple document library.

The 'DocKeep Scan Library (RT)' solution contains three records. Each record has a single container field that holds an image that was created by Acordex's DocKeep Pro application software and a Fujitsu fi-6130Z scanner.

This solution is downloaded as a FileMaker run-time (RT) solution and as such does not require the FileMaker Pro application. Run-time solutions are completely self-contained. They are also launched in a different manner than a regular FileMaker Pro file.

Please follow the instructions for launching a FileMaer (RT) solution.

Instructions for Launching a FileMaker (RT) Solution

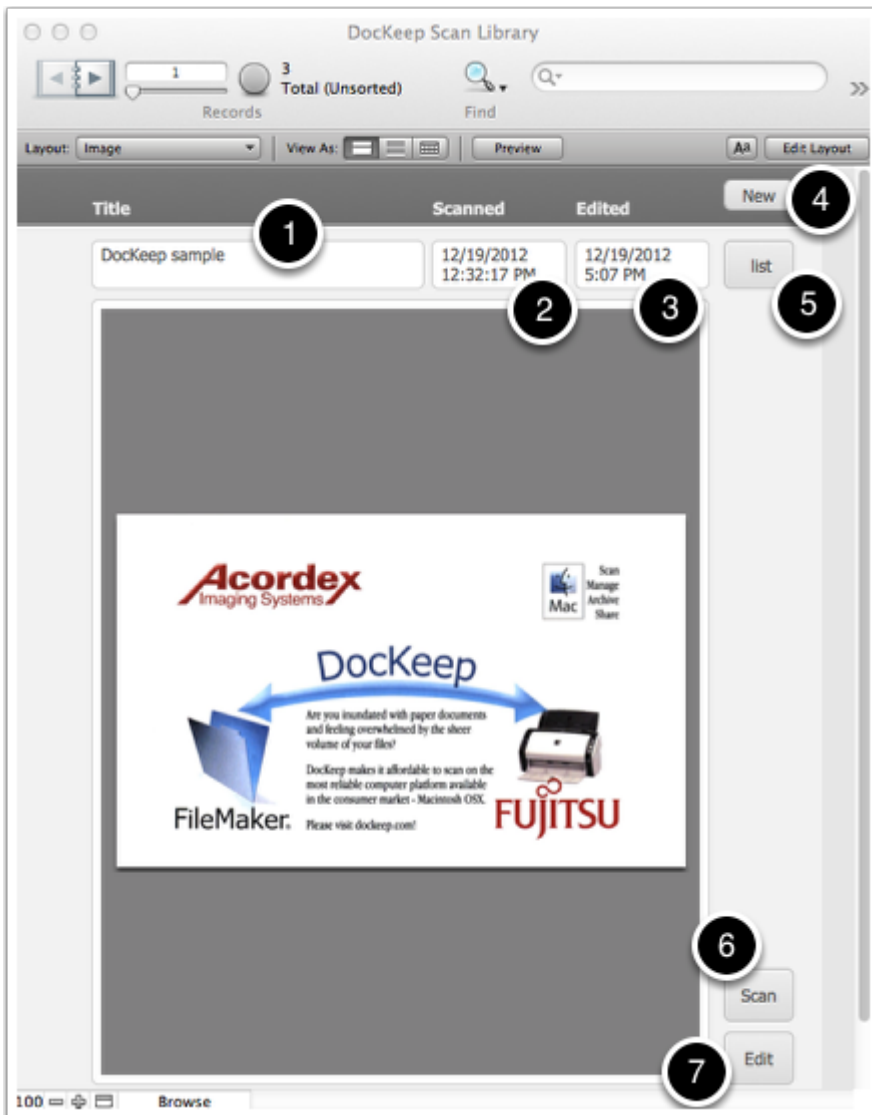

Requirements

- You must be running Mac OS 10.6 or greater
- You must be running DocKeep Pro Version 8 ([download 15-day trial](#))
- You must use a Fujitsu fi-series scanner

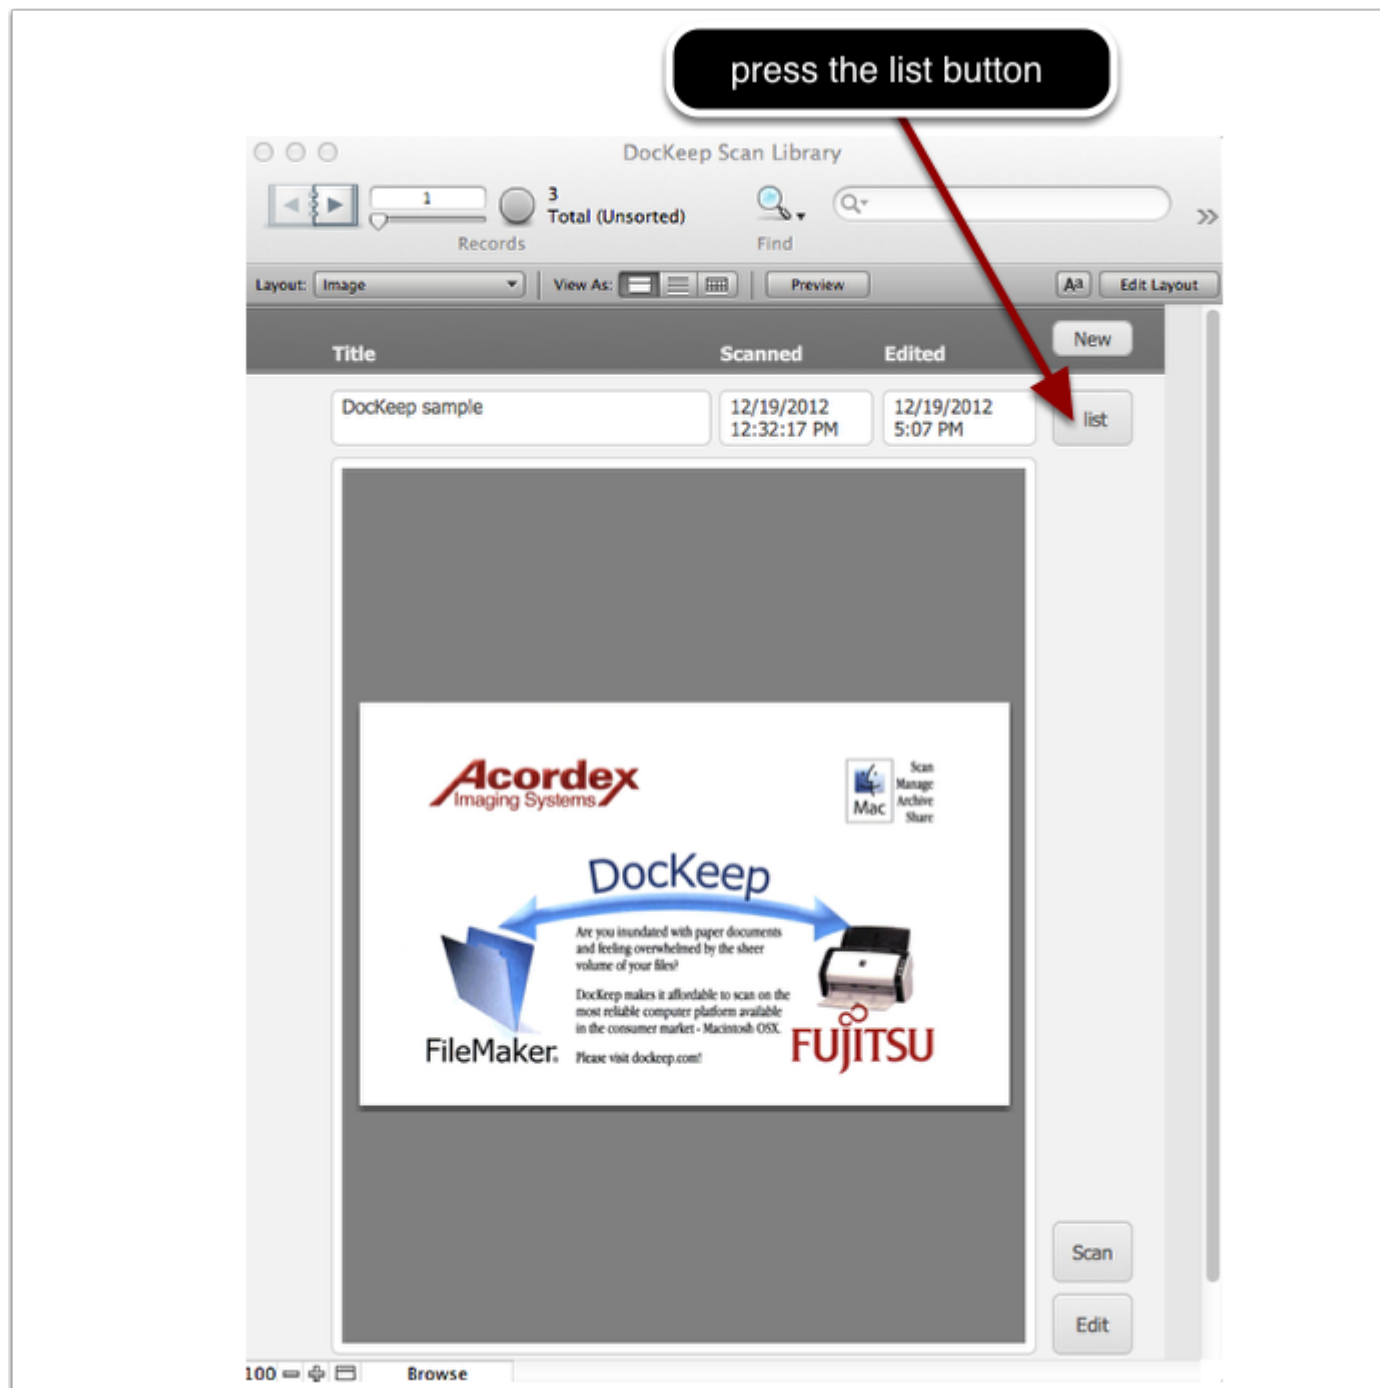

Step 1 - OPEN the 'DocKeep Scan Library' FileMaker solution

When this solution is opened with FileMaker, the first record will be displayed in the "Image" layout.

1. The **Title** field is a text field that the user can modify
2. The **Scanned** field is automatically updated at the time DocKeep saves the scanned image to the container.
3. The **Edited** field is automatically updated at the time DocKeep re-saves an existing image to the container.
4. The **New** button will create a new empty FileMaker record.
5. The **list** button will change the display to the 'list layout'.
6. The **Scan** button will: open a DocKeep image window and activate the scanner and save the scanned image to the 'image' container
7. The **Edit** button will: export the contents of the 'image' container and load it into DocKeep

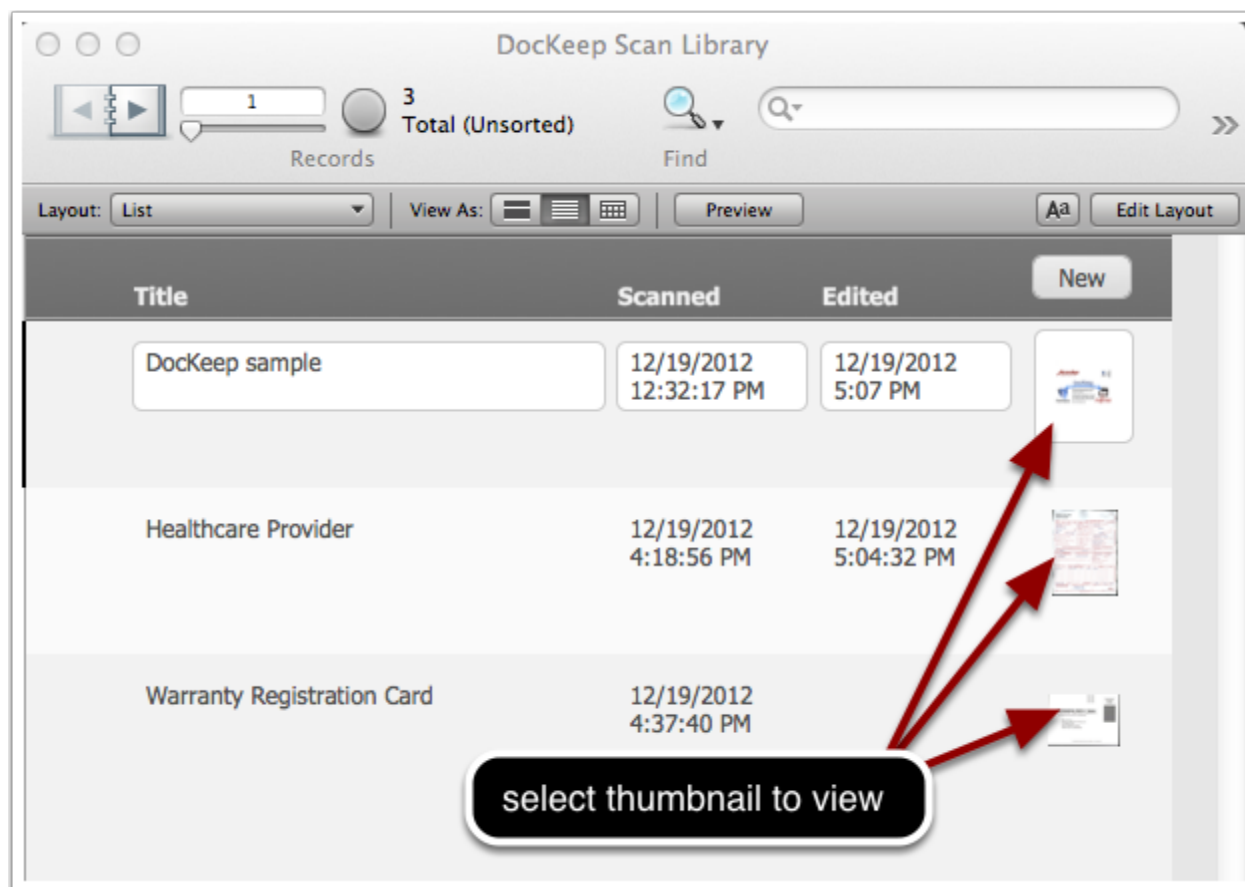

Step 2 - Change to the 'list' layout

Step 3 - Observe the 'list' layout

Select the thumbnail image to view it in with the 'Image' layout.

Summary

This example solution demonstrates how DocKeep Pro can be integrated with FileMaker Pro.
